**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4,6-12,14-21, 22-24, and 32, drawn to a circuit board module, classified in class 361, subclass 686.
- II. Claims 25,26 and 28-31, drawn to a method for assembling a circuit board module, classified in class 29, subclass 592.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by a materially different process, specifically the support assembly need not be rotated relative to the faceplate to form a latch with the coupling member and the face plate, the latch can be formed by simply coupling the support assembly to the faceplate in a position that instantly forms a latch.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
